How do I connect my CRM to NexaSupport?

To connect your CRM to NexaSupport, you'll need to follow a few steps. First, please ensure that your CRM is one of the supported systems, which include Salesforce, HubSpot, Microsoft Dynamics, and Zoho CRM, as mentioned in the [Integrations Overview](#) section.

Here are the general steps to get you started:

1. Choose your CRM system from the list of supported integrations.

2. Register a connected app in your CRM's settings and note the redirect URI.

3. Configure the OAuth flow in NexaSupport, making sure the callback URL matches the redirect URI.

How do I connect my CRM to NexaSupport?

How do I set up auto-tagging?

What happens if CRM sync fails?

How do I invite my team members?

How do I configure ticket routing rules?

What are the API rate limits?

How do I set up auto-tagging?

To set up auto-tagging, you can follow these steps:

1. Toggle on **Auto-Tag by Account Tier** to enable the feature.

2. This will automatically apply customer tier tags (Starter, Growth, Enterprise) to incoming tickets based on the Salesforce Account Type field.

Guide Section: The information about auto-tagging by account tier is found in the [Integrations Overview](#) section, specifically the part that discusses additional configuration options after setting up the CRM integration.

Sources: Set Up Automations - Connect Your CRM

How do I invite my team members?

To invite your team members, you can follow these steps:

1. Navigate to Settings > Users & Teams.

2. Click on "Invite Members".

3. Enter each teammate's email address.

{\n \"draft_reply\": \"The 403 forbidden response you're experiencing with your API key after upgrading your plan is likely due to the key being scoped to your previous plan tier and not having been updated to reflect the new permissions. When a plan upgrade occurs, we may provision a new workspace context or expand permission scopes that existing keys do not automatically inherit. To help resolve this issue, I recommend replacing the API key with a new one that is scoped to your current plan tier. If the 403 error persists after replacing the key, please open the API Audit log and go to Settings > Developer > Audit log and look for the specific failed request. The audit entry will include a rejection_reason field that can help identify whether the issue is a scope mismatch, IP restriction, or workspace suspension.\\n\\nAs a best practice, after any plan upgrade, it's a good idea to audit all active API keys from the Key Management panel and re-scope them to take advantage of new permission levels unlocked by your new plan tier.\\n\\nSources: Why is my API key returning a 403 error after I upgraded my plan?\\n\\nConfidence: High\", \n \"sources\": [\n \"https://help.nexa.ai/kb/articles/why-is-my-api-key-returning-a-403-error-after-i-upgraded-my-plan?\", \n \"https://help.nexa.ai/kb/articles/tickets-403-error\" \n], \n \"confidence\": 1\n}\n
